

Ginés López Montalbán

Design Engineer Product Design & Frontend

Designer and Frontend Engineer with over 6 years in digital product, UX/UI and frontend development, built on a previous 15+ year career in graphic design, identity and visual communication. I work at the intersection of design, technology and systems, translating complex problems into product experiences, Design Systems and coherent, maintainable frontend implementations. I have worked across UX/UI and engineering, led frontend architecture and component systems for several products and, more recently, researched human-AI collaboration processes and agent-based work.

Core experience

Laberit — Frontend Developer & UX/UI Analyst

Valencia · Nov 2025 — present

- Design and development of a cross-product library of reusable components, tools and resources with Angular 18 and Ionic 8 for hybrid web and mobile applications.
- Implementation of the Design System and accessibility criteria inside the library itself, centralising tokens, components, behaviours and documentation so consuming applications inherit a shared design and accessibility baseline.
- Development of cross-cutting accessibility solutions for hybrid applications, embedding WCAG 2.1 AA requirements into components, interaction patterns and reusable behaviours.
- Frontend architecture with Angular Signals, oriented towards reactive state and component reuse.

Romeu IT — Frontend Analyst Programmer & UX/UI Analyst

Valencia · Oct 2020 — Mar 2024

- Frontend and UX/UI lead across three corporate applications built with Angular and Ionic, defining shared criteria for architecture, structure and reuse.
- Design of a frontend architecture based on reusable components, lazy loading, DTOs, integration contracts and REST API consumption.
- Cross-functional UX/UI role between product and engineering, translating business requirements and user needs into flows, interface patterns, wireframes and high-fidelity Figma prototypes, kept consistent with the frontend architecture.
- Design and evolution of a corporate Design System, consolidated as the shared standard across products.

Applied research

Design-to-Code and human-AI collaboration

Warp · 2026

Research into how much of the definition → design/prototyping → frontend implementation flow could be delegated to AI agents, and which conditions make that reliable, traceable and reproducible.

- Design and execution of real design → code conversion tests on Angular, including agents with no prior conversation history, to assess replicability and context dependency.
- Development of a staged methodology based on traceability, ambiguity reduction, cumulative enrichment, versioning and validation gates, separating responsibilities across definition, design and implementation.
- Formalisation of contracts between layers so each agent could work from explicit artefacts; the tests identified the design → code specification contract as the main bottleneck for output fidelity.
- Distributing research, documentation, testing and development across multiple agents surfaced a second problem: keeping knowledge, decisions, context and responsibilities coherent between instances with no shared memory.

Education

MA in Contemporary Philosophical Thought

Universitat de València
2008–2010

BA in Fine Arts

Sculpture and Audiovisual Media

Universitat Politècnica de València
2002–2007

Diploma in Design and Graphic Arts

Fundación Casa de la Moneda, Madrid
1998–2001

Professional Certification

IFCD0210 — Web Technologies
Application Development
Level 3

Languages

Spanish: native
English: B2

Design-to-Code and human-AI collaboration · continued

- In response I developed Warp, a Git-based knowledge architecture for persistent responsibilities, interchangeable agents, explicit documentary authority and automatic structural validation.
- Subsequent critical comparison against DDD / Bounded Contexts, Data Mesh, ADR/RFC, IBIS, W3C PROV and Team Topologies, using existing models to evaluate, simplify and scope the solution.

Additional experience

Vértice Elearning — Trainer in Web Design, Usability and Accessibility

Málaga / remote · Nov 2024 — Oct 2025

Remote training in web design, usability and digital accessibility for Junta de Andalucía programmes. Preparation and delivery of content on interface, user experience and accessibility.

Elora Design — Frontend Developer & UX/UI Designer

Murcia · Sep — Dec 2019

Design and implementation of an application with Angular and Ionic, combining frontend development and UX/UI. Contributed to Imoles, an AI project applied to medical diagnosis, covering UX analysis, interface design and prototyping.

Prodesign · ATYF · Dislomar — Senior Graphic Designer, Art Direction and Web Development

Murcia / Madrid / Valencia · 2000 — 2019

Over 15 years in graphic design, corporate identity, branding, art direction and visual communication. Progressive move into digital and web projects, adding interface design and frontend technologies. Solid grounding in composition, visual hierarchy, typography, identity and graphic systems, later applied to digital product, UX/UI and Design Systems.

Capabilities

Product Design & Design Engineering

Product Design · UX/UI · Design Systems · Interaction Design · Information Architecture · Accessibility · Component Design · Design-to-Code workflows

Frontend Engineering

Angular · Ionic · TypeScript · JavaScript · HTML5 · CSS3 / SASS · RxJS · Angular Signals · REST APIs · OpenAPI / Swagger

Architecture & Quality

Frontend Architecture · Reusable Component Systems · Git · Cypress E2E · SonarQube · ESLint · Docker · SOLID · WCAG 2.1 AA

Human-AI & Systems

Human-AI workflows · Agent-assisted development · Context Design · Knowledge Architecture · Process Design
